Request for Proposal from Approved Mitigation Bank Sponsors.

The City of Raleigh Public Works Department (“CORPWD”) requests proposals from Environmental Mitigation Providers (“Providers”) for mitigation bank credits (“Credits”). Respondents must have a proven track record of successfully providing mitigation services in the State and be the owner (“Mitigation Bank Sponsor”) of mitigation bank(s) approved by State and Regulatory agencies to offer Credits for sale to offset environmental impacts associated with City, State and Federal Regulatory requirements in the Hydrological Unit Code (“HUC”) Neuse River Drainage Basin 03020201. The mitigation services required for this request for proposal will be an on call, as needed basis for a multi-year period.

The purpose of this service is to provide compensatory mitigation credits on an on-call basis for CORPWD projects. Delay in receipt of environmental permits due to availability of mitigation resources for City projects affect timing and costs. It is the intent of the CORPWD to establish a service agreement with a primary mitigation provider that can meet the credit types specified below:

- Riparian and/or Non Riparian Wetland Credits in increments of 0.10 of an acre or more.
- Stream Mitigation Units in increments of 1.0 linear feet or more.
- Riparian Buffer Units in increments of a 0.10 square footage or more.
- Nitrogen Offset in increments of a 0.10 pounds or more.

Response to this proposal does not commit the City to the purchase of credits.
