Technology and the Capital Area Greenway

The Capital Area Greenway (CAG) System is a network of paved, gravel, and dirt trails, streams, and creeks, and provides opportunities for conservation, recreation and education. People to Raleigh parks and other community features. Greenways can also function along utility and railroad corridors where natural conditions are unlikely to be a major constraint. The system has over 100 miles of paved and unpaved trails and over 370 miles of protected stream corridors.

Greenways trails typically include a 10-foot wide asphalt path that can be used for recreational activities such as biking, hiking, inline skating, jogging and strolling. These paths can also be used as a means of getting to destination points such as work, school, parks and shopping centers without the use of a car.

The framework of the CAG system includes Walnut Creek, Crabtree Creek, and tributaries to the west of the Neuse River and Richland Creek, Hamms Creek and Richland Creek to the east. Many of the city’s major ecological features can be experienced by crossing these trails and following these waters. We invite you to experience this network of interconnected trails whether for fun, for recreation, wildlife viewing, and commuting.
